
NON-SELF-SUPPORTING PROFILE SYSTEMS

PERGOLUX

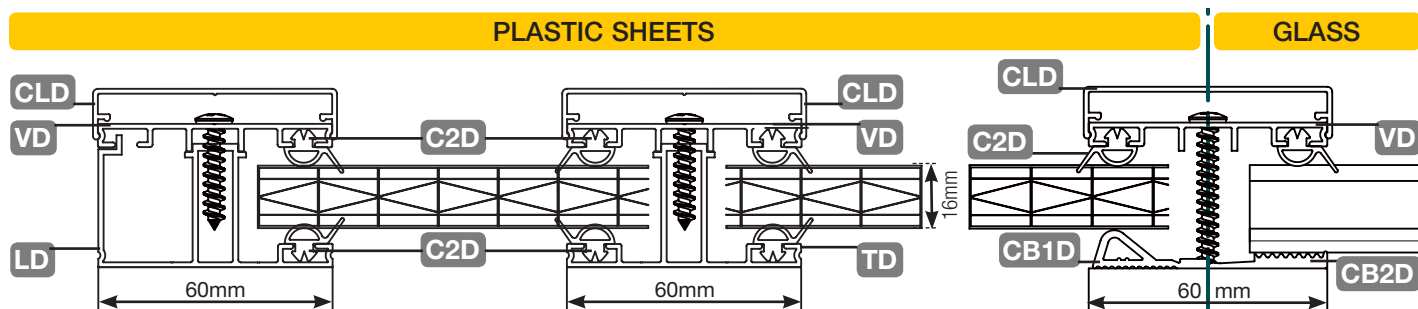

Profiles for a timber supporting structure

Any construction with multi-walled plastic sheets requires non-self-supporting aluminium profiles. These profiles must be mounted on timber or steel rafters before fixing the sheets into them. The multi-walled sheets are not screwed. Heat can cause the multi-walled plastics sheets to expand and can cause cracks. The aluminium profiles allow the sheets to move enough to prevent these cracks. We offer different types of profiles to click or to drill in plastic material or in aluminium. The choice is yours!

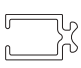

The Pergolux D Series can be assembled with “shim tape” or as a full set. Thanks to the high-quality profiles, your conservatory roof will have an elegant design.
